The specification also CC describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO CC polypeptides can be used to modulate cellular proliferation, modulate CC proteins can be used to treat any von Willebrand factor-associated CC disorder, regulate extracellular matrix structuring, cellular adhesion. The CC and cell trafficking and/or migration, modulate cellular interactions, CC modulate cell adhesion in proliferative disorders, such as cancer, CC modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood CC and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial CC asthma and bronchiectasis, intestinal disorders, spleen associated CC diseases, modulate renal disorders, treat cardiovascular disorders such CC and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, CC hydrocephalus, brain herriations, latrogenic disease, inflammations, CC hydrocephalus and encephalitis, Alzheimer's Disease, cerebral CC concert the present seguence does not appear in the specification, it was CC concert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Ma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO CC polypeptides can be used to modulate cellular proliferation, modulate CC cellular differentiation and/or modulate cellular adhesion. The CC proteins can be used to treat any von Willebrand factor-associated CC disorder, regulate extracellular matrix structuring, cellular adhesion, CC and cell trafficking and/or migration, modulate cellular interactions, CC modulate cell adhesion in proliferative disorders, such as cancer, CC modulate the proliferation, differentiation, and/or function of cells CC that appear in the bone marrow, and leukocytes, treat bone marrow, blood CC and hematopoietic associated diseases and disorders, atelectasis, CC pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial CC asthma and bronchiectasis, intestinal disorders, spleen associated CC diseases, modulate the proliferation, differentiation, CC and/or function of bone and cartilage cells and to treat bone and/or CC cartilage associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders. It was created using information provided.

AAA75163-65 encode human TANGO 261 proteins. The specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow. block
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; ischemic heart disease; hydrocephalus; brain herniation; latrogenic disease; inflammation; meningitis; brain herniation; latrogenic disease; hydrocephalus; brain herniation; latrogenic disease; latrogenic disease; latrogenic disease; latrogenic disease; parkinson's disease; Alzheimer's Disease; cerebral toxoplasmosis; parkinson's disease;

              Human neuron-associated proteins (NEUAP) can be used for for treating or preventing a disorder associated with decreased expression or activity of NEUAP. Antagonists of NEUAP are useful for treating or preventing disorder associated with increased expression or activity of NEUAP. NEUAP or their fragments or derivatives are useful for treating neurological disorder such as epilepsy, ischemic cerebrovascular disease, stroke, cerebral neoplasms, Alzheimer's disease, pick's disease, Huntington's disease, dementia and parkinson's disease. NEUAPs are also useful for treating other demyelinating diseases, bacterial and viral meningitis, prion

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Qy
                                  The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, ActivinyInhibin activity, chemotactic/chemokinetic activity, heemostatic assays for receptor activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               21-JAN-2000;

                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activitites such as: Immune system suppression, ActivinyInhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                  Tang

The invention relates to an isolated nucleic acid molecule encoding a CC Mechanically Induced Vascular Receptor (MIVR)-1 polypeptide having CC cardiac cell anti-apoptotic activity and fragments of it provided CC cardiac cell anti-apoptotic activity and fragments of the provided CC (MM_004338 and AQ177461. Also included are expression vectors, host CC (MM_004338 and AQ177461. Also included are expression vectors, host CC (MIVR-1, contacting a molecule having cardiac cell anti-apoptotic activity with a candidate agent, where the molecule is a nucleic acid molecule CC (MIVR-1, IEX-1, VDUP-1, BTG-2 and TIS-11d or its comprising MIVR-1, IEX-1, VDUP-1, BTG-2 and TIS-11d or its CC (MIVR-1) and thereby identifying a modulator. The cardiac cell anti-capoptotic molecules and nucleic acids of the invention are useful for CC (MIVR-1) and monitoring progression of such diseases and treating, diagnosing and monitoring progression of such diseases and cells e.g. cardiac hypertrophy, myocardial infarction, CC endothelial cells e.g. cardiac hypertrophy, myocardial infarction, CC encodes mouse MIVR-1.
                                                                                                                                                                                                                     QΥ

The cardiac cell anti-apoptotic molecules and nucleic acids of the invention are useful for treating, diagnosing and monitoring progression of such diseases and disorders as characterised by increased apoptotic cell-death of vascular endothelial cells e.g. cardiac hypertrophy, myocardial infarction, stroke, arteriosclerosis and heart failure. The present sequence is one of the four Genbank sequences (AI761441.1) which are homologous to the cDNA for human MIVR-1 and which are specifically disclaimed.

```
The present sequence encodes a murine TANGO 261 polypeptide. The CC specification also describes TANGO 266, TANGO 262, and CC TANGO 267. The TANGO polypeptides can be used to modulate cellular CC cellular adhesion. The proteins can be used to treat any von Willebrand CC cellular adhesion. The proteins can be used to treat any von Willebrand CC cellular adhesion, and cell trafficking and/or migration, modulate CC disorders, such as cancer, modulate cell adhesion in proliferative and/or function of cells that appear in the poliferative and/or function of cells that appear in the bone marrow, and leukocytes, disorders, atelectasis, pulmonary congestion or oedema, emphysema, and chronic bronchitis, bronchial asthma and bronchiectasis, intestinal CC disorders, spleen associated diseases, modulate renal disorders, treat calls and to treat bone and/or function of bone and cartilage calls and to treat bone and/or cartilage associated diseases or ovaries, cerebral oedema, bacterial and viral meningitis, Alzheimer's company and encephalus, brain herniations, introgenic considerase, inflammations, bacterial and viral meningitis, Alzheimer's considerers, hydrocephalus and encephalitis, and treat hepatic disorders, hydrocephalus and encephalitis, and treat hepatic
                                                                                                                                                                                                                              Matches

The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel

CC AAA75166-68 encode murine TANGO 261 proteins. The specification also CC describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO CC polypeptides can be used to modulate cellular proliferation, modulate CC cellular differentiation and/or modulate cellular adhesion. The CC disorder, regulate extracellular matrix structuring, cellular adhesion, CC modulate cell trafficking and/or migration, modulate cellular interactions, CC modulate the proliferation, differentiation and/or function of cells can be extracellular matrix structuring, cellular adhesion, CC modulate the proliferation, differentiation, and/or function of cells can appear in the bone marrow, and leukocytes, treat bone marrow, blood complimonary congestion or oedema, emphysema, chronic bronchitis, bronchial compliments of the condulate canal disorders, treat bone mascociated diseases, modulate renal disorders, spleen associated compliments of the condulate canal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 15

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score

    No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                     Published_Applications_NA:*
